HTML CSS JAVASCRIPT SQL PHP JQUERY BOOTSTRAP ANGULAR XML TUTORIALS REFERENCES EXAMPLES FORUM

# HTML <frameset> Tag. Not Supported in HTML5.

[« Previous](#) [Complete HTML Reference](#) [Next »](#)

**Example**

A simple three-framed page:

```
<frameset cols="25%,*,25%">
  <frame src="frame_a.htm">
  <frame src="frame_b.htm">
  <frame src="frame_c.htm">
</frameset>
```

[Try it Yourself »](#)

To look at frames we are going to look at the examples under XHTML. <http://www.pgrocer.net/Cis44/cis44sampXhtml.html> and scroll down to frames.

More "Try it Yourself" examples below.

## Definition and Usage

The <frameset> tag is not supported in HTML5.

The <frameset> tag defines a frameset.

The <frameset> element holds one or more <frame> elements. Each <frame> element can hold a separate document.

The <frameset> element specifies HOW MANY columns or rows there will be in the frameset, and HOW MUCH percentage/pixels of space will occupy each of them.

**Note:** If you want to validate a page containing frames, be sure the <DOCTYPE> is set to either "HTML Frameset DTD" or "XHTML Frameset DTD".

Header Page - Mozilla Firefox

File Edit View History Bookmarks Tools Help

Header Page

www.pgrocer.net/Cis44/HTML/frames/indexbx.html

Most Visited Getting Started Latest Headlines Assignment summary RSS

## TOP OF SCREEN!!!

This is the top header information!

---

## BOTTOM OF SCREEN!!!

This is the bottom header information!

Source of http://www.pgrocer.net/Cis44/HTML/frames/indexbx.html - Mozilla Firefox

```

1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>Header Page</title>
7 </head>
8 <frameset rows="50%,*">
9 <frame src="hdrbx.html" name="hdrtop" />
10 <frame src="hdrbx.html" name="hdrbottom" />
11 </frameset>
12 </html>
13

```

I have established a frameset (notice I did this instead of body).  
I have established that I want two rows: one will be 50% of the height and the other will be the rest (so it will also be 50%).  
With the <frameset> I have the information that will go inside the frame area (which in this case is a row).  
I am actually putting two different pages in the two frames. The top frame will contain hdrbx.html and the bottom frame will contain hdrbx.html.  
I have given each of these a name which we are not currently using but will use later in the explanation.

Desktop 3:22 PM 2/9/2015

### TOP OF SCREEN!!!

This is the top header information!

```
Source of http://www.pgrocer.net/Cis44/XHTML/frames/hdrts.html - Mozilla Firefox
File Edit View Help
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>This is the top...</title>
7 </head>
8 <body>
9 <h1>TOP OF SCREEN!!!</h1>
10 <p>This is the top header information!<br />
11 
12 </p>
13 </body>
14 </html>
15
```

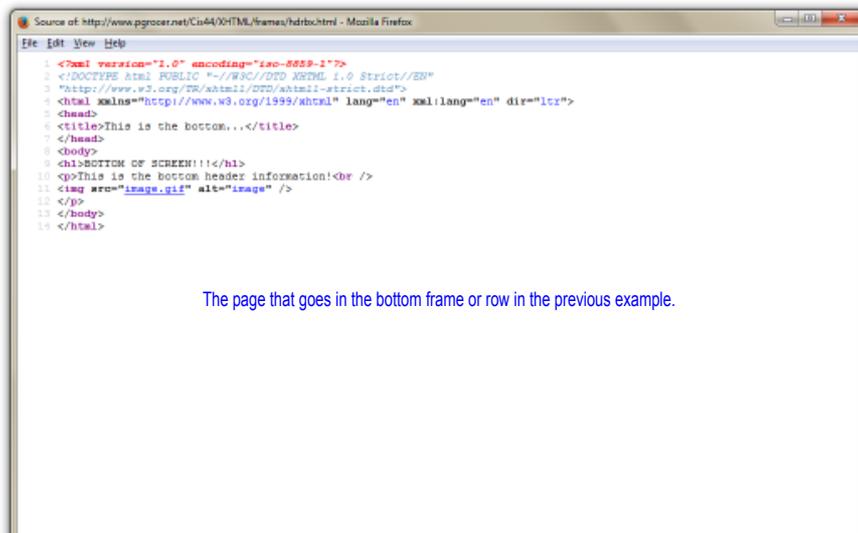

This is the page that appears in the first frame which is in the top row of the example on the previous slide. Remember that in XHTML you need to have all tags have an ending tag so <br /> and <img... />.

### BOTTOM OF SCREEN!!!

This is the bottom header information!

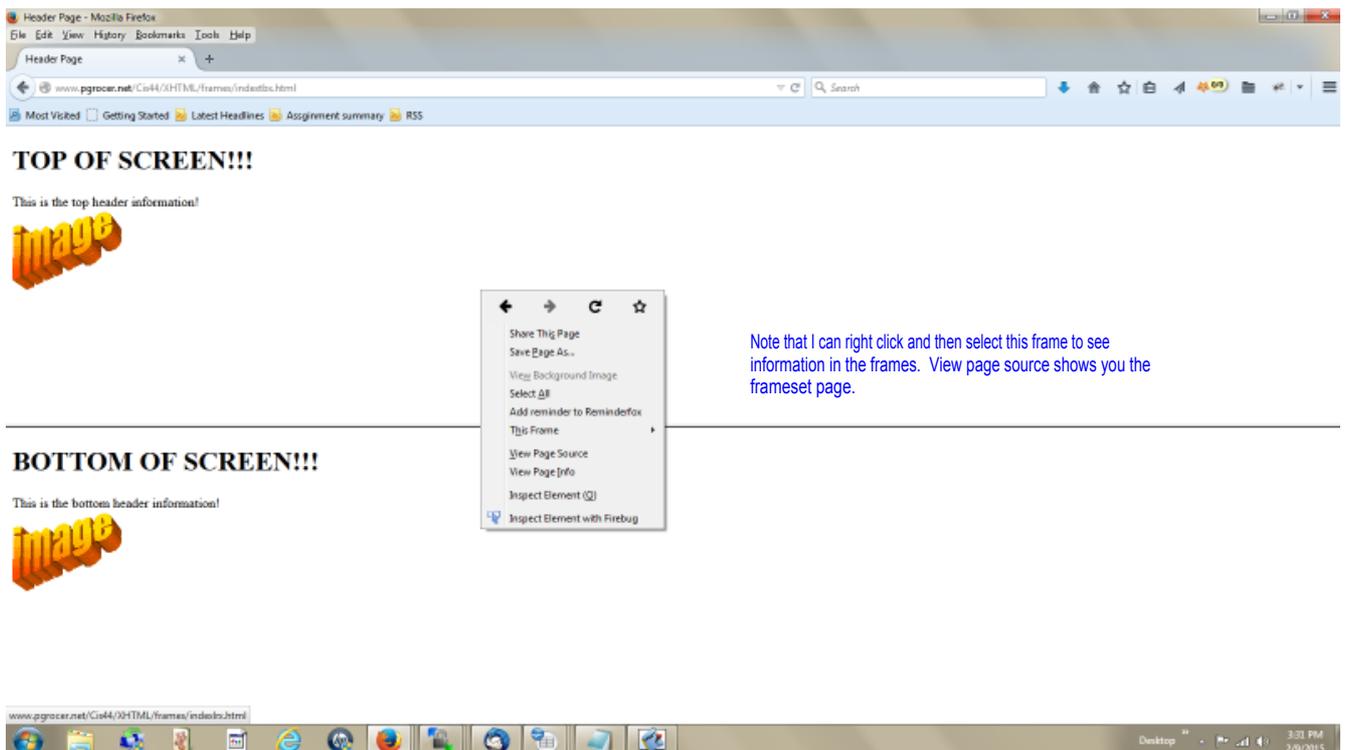

The page that goes in the bottom frame or row in the previous example.

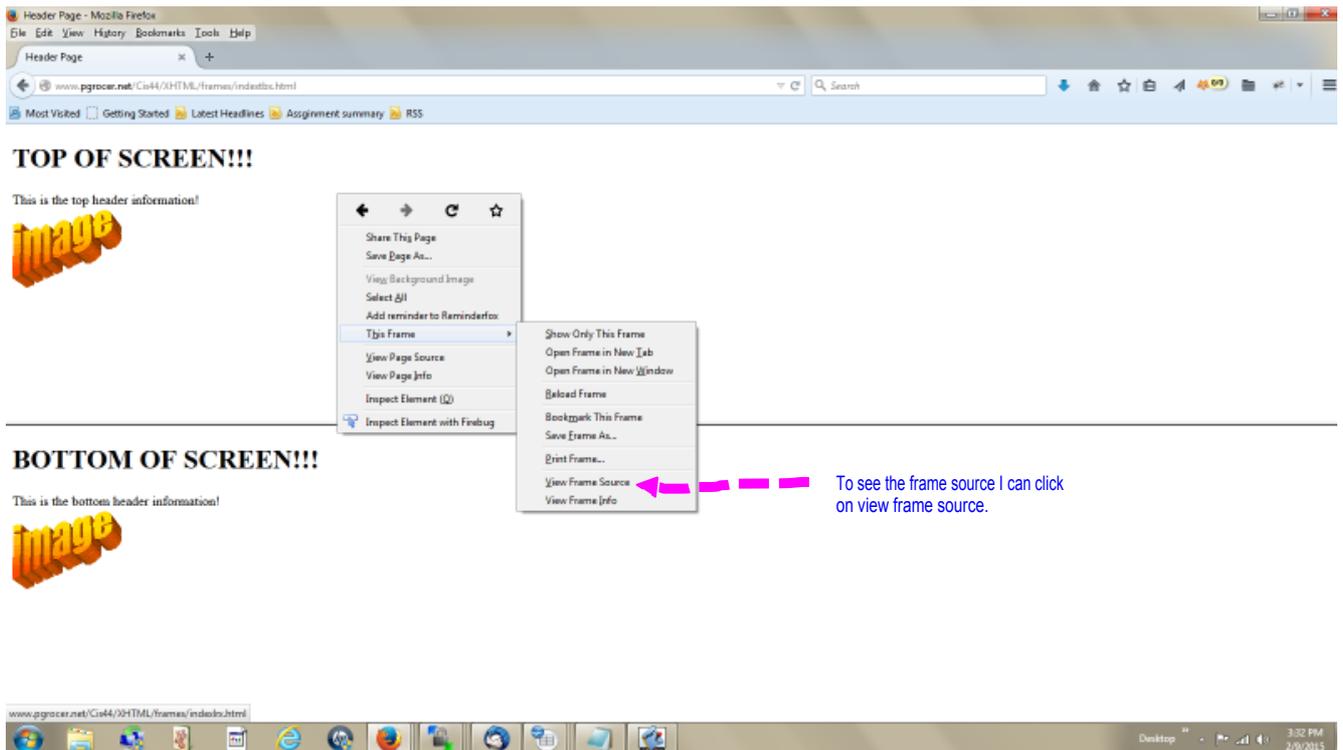

The screenshot shows a Mozilla Firefox browser window with the address bar displaying `www.pgrocer.net/Cis44/XHTML/frames/indexbx.html`. The page content includes the text **TOP OF SCREEN!!!** and **BOTTOM OF SCREEN!!!**, each followed by the text "This is the top/bottom header information!" and a 3D-style "Image" placeholder. An overlay window titled "Source of: http://www.pgrocer.net/Cis44/XHTML/frames/indexbx.html - Mozilla Firefox" displays the following HTML code:

```
<?xml version="1.0" encoding="iso-8859-1"?>
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
<html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
<head>
<title>Header Page</title>
</head>
<frameset rows="50%,*">
<frame src="hdrtx.html" name="hdrtop" />
<frame src="hdrbx.html" name="hdrbottom" />
</frameset>
</html>
```

Below the code viewer, a blue text annotation reads: "So again, this example is made up of three pages. The indexbx.html page that is set up using <frameset> and the two pages that appear in the frames: hdrtx.html and hdrbx.html."

Note that I can right click and then select this frame to see information in the frames. View page source shows you the frameset page.

The screenshot shows a Mozilla Firefox browser window displaying a page titled "Header Page". The page content includes:

- TOP OF SCREEN!!!**
- This is the top header information!
- 

A source code viewer window is overlaid on the page, showing the HTML source for the top frame. A pink dashed arrow points from the 3D 'image' text to the source code. The source code includes:

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>This is the top...</title>
7 </head>
8 <body>
9 <h1>TOP OF SCREEN!!!</h1>
10 <p>This is the top header information!<br />
11 
12 </p>
13 </body>
14 </html>
15
```

Below the source code viewer, a blue text annotation reads: "I am now seeing the source of hdx.html which is in the top frame."

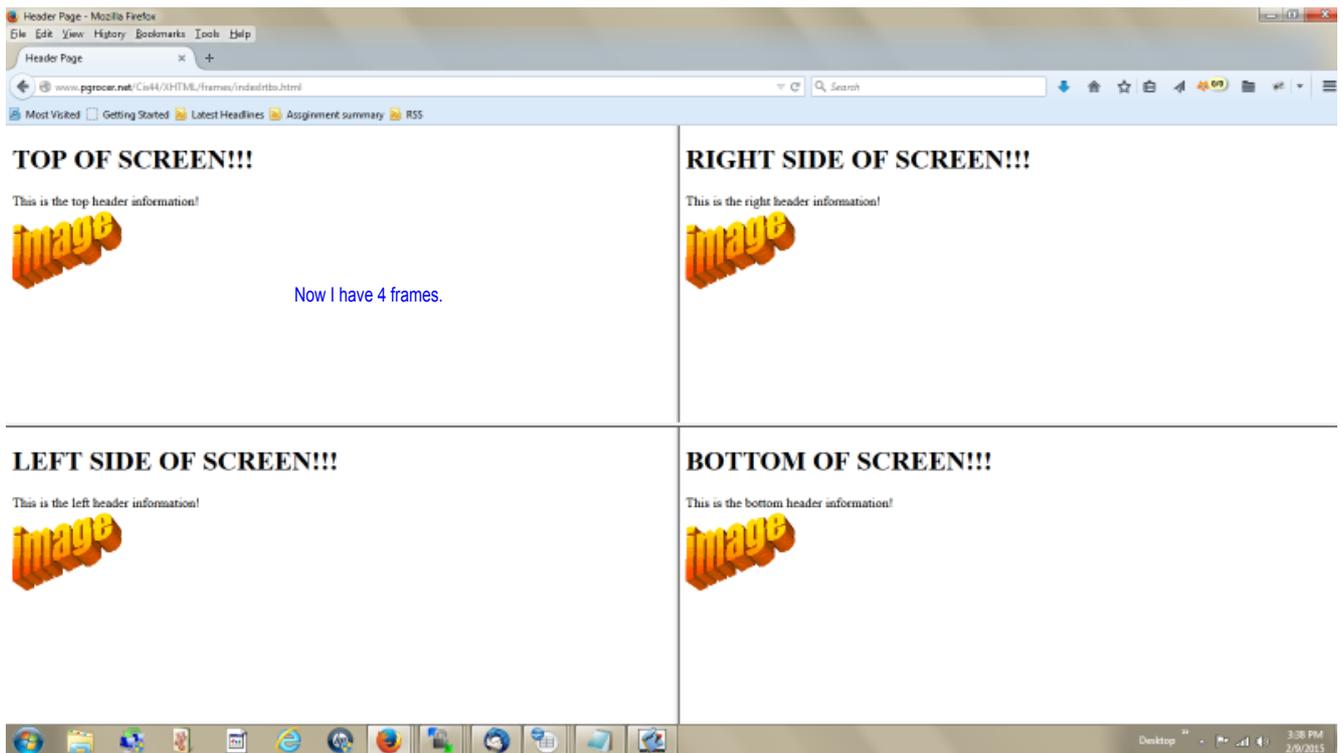

At the bottom of the browser window, the page title "Header Page" and the URL "www.pgrocer.net/Cis44/0HTML/frames/indexbc.html" are visible. The Windows taskbar at the bottom shows the system tray with the date and time: "Desktop 3:04 PM 2/9/2015".

**LEFT SIDE OF SCREEN!!!**  
This is the left header information!  
image

**RIGHT SIDE OF SCREEN!!!**  
This is the right header information!  
image

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C/DTD XHTML 1.0 Frameset/EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>Header Page</title>
7 </head>
8 <frameset cols="50%,50%">
9 <frame src="hdrlx.html" name="hdrleft" />
10 <frame src="hdrrx.html" name="hdrright" />
11 </frameset>
12 </html>
13
```

The previous example dealt with rows, this one deals with columns. It sets up two columns of 50% each and it puts `hdrlx.html` in the left frame and `hdrrx.html` in the right frame. Again, remember these are separate pages and you can view them individually at my site (they are on the list of pages under frames).

The screenshot shows a Mozilla Firefox browser window displaying a web page titled "Header Page". The page is divided into four quadrants by a horizontal and a vertical line. Each quadrant contains the text "TOP OF SCREEN!!!", "RIGHT SIDE OF SCREEN!!!", "LEFT SIDE OF SCREEN!!!", and "BOTTOM OF SCREEN!!!". Below each text label is a 3D "image" placeholder. A source code window is overlaid in the center, showing the HTML code for the page. The code includes a frameset with two columns and two rows. Pink dashed arrows point from the source code window to each of the four quadrants. A blue text box at the bottom center explains the frameset configuration.

Header Page - Mozilla Firefox

**BOTTOM OF SCREEN!!!**  
image

Source of http://www.pgrocer.net/Cis44/XHTML/frames/indexrbs.html - Mozilla Firefox  
File Edit View Help  
1 <?xml version="1.0" encoding="iso-8859-1"?>  
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"  
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">  
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">  
5 <head>  
6 <title>Header Page</title>  
7 </head>  
8 <frameset cols="50%,\*" rows="50%,\*">  
9 <frame src="hdrtx.html" name="hdrtrup" />  
10 <frame src="hdrtx.html" name="hdrtright" />  
11 <frame src="hdrtx.html" name="hdrleft" />  
12 <frame src="hdrtx.html" name="hdrbottom" />  
13 </frameset>  
14 </html>  
15

The frameset specified two cols and two rows. It fills the first row and then the second row by doing the first column in the first row and then the second column in the first row etc.

Desktop 3:59 PM 2/9/2015

**TOP OF SCREEN!!!**  
This is the top header information!  
image

**LEFT SIDE OF SCREEN!!!**  
This is the left header information!  
image

**RIGHT SIDE OF SCREEN!!!**  
This is the right header information!  
image

**BOTTOM OF SCREEN!!!**  
This is the bottom header information!  
image

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="" dir="ltr">
5 <head>
6 <title>Header Page</title>
7 </head>
8 <frameset rows="258,508,*">
9 <frame src="hdrbx.html" name="hdrtop" />
10 <frameset cols="50%,*">
11 <frame src="hdrlx.html" name="hdrleft" />
12 <frame src="hdrrx.html" name="hdrright" />
13 </frameset>
14 <frame src="hdrbx.html" name="hdrbottom" />
15 </frameset>
16 </html>
17
```

First notice that I set up three rows with the middle row taking 50% of the space. Then I set up the frame for the first row and put `hdrx.html` into that frame. Next I set up a framset of two columns and within that I put two frames that hold `hdrx.html` and `hdrx.html`. Finally, the bottom row is a frame that holds `hdrbx.html`.

![Screenshot of a Mozilla Firefox browser window showing a two-column frame layout. The left column is titled 'LEFT SIDE OF SCREEN!!!' and contains the text 'This is the left header information!' and a 3D 'image' placeholder. The right column is titled 'RIGHT SIDE OF SCREEN!!!' and contains the text 'This is the right header information!' and another 3D 'image' placeholder. Below the right column, there is a note: 'Note: This uses the target_self which means that the new screen will be loaded into this frame.' and a blue 'NEXT' button. An inset window shows the source code of the page, which includes a frameset with two frames: 'hdrleft.html' and 'hdrright.html'. The source code is as follows: <pre>1 <?xml version='1.0' encoding='iso-8859-1' ?>
2 <!DOCTYPE html PUBLIC ](hdrright.html)

**LEFT SIDE OF SCREEN!!!**

This is the left header information!

**RIGHT SIDE!!!**

This is the right header information!

Note: This uses the target\_self which means that the new screen will be loaded into this frame.

[NEXT](#)

target="\_self" tells where the new page should be put. In this example when I click on the NEXT button I bring up hdrnew.html and it is loaded on top of the frame contents.

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>This is the right...</title>
7 </head>
8 <body>
9 <h1>RIGHT SIDE!!!</h1>
10 <p>This is the right header information!<br />
11 <br />
12 Note: This uses the target_self which means that the new screen will be loaded into this
13 frame.<br />
14 <a href="hdrnew.html" target="_self"></a></p>
15 </body>
16 </html>
17
```

**LEFT SIDE OF SCREEN!!!**  
This is the left header information!

**NEW VERSION OF RIGHT SIDE!!!**  
This is the right header information - new version!

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>Header Page</title>
7 </head>
8 <frameset cols="33%,*">
9 <frame src="hdr1x.html" name="hdrleft" />
10 <frame src="hdr2x.html" name="hdrright" />
11 </frameset>
12 </html>
13
```

```
1 <?xml version="1.0" encoding="iso-8859-1"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4 <html xmlns="http://www.w3.org/1999/xhtml" lang="en" xml:lang="en" dir="ltr">
5 <head>
6 <title>This is the right...</title>
7 </head>
8 <body>
9 <h1>NEW VERSION OF RIGHT SIDE!!!</h1>
10 <p>This is the right header information - new version!<br />
11 
12 </p>
13 </body>
14 </html>
15
```

I clicked on next and the page I was bringing up is now located over the page with the next button as a result of target self.

**LEFT SIDE OF SCREEN!!!**

This is the left header information!

image

**RIGHT SIDE!!!**

This is the right header information!

image

Note: This uses the target\_top which means that the new screen will be loaded as a full screen.

next

```
